

[INTROVERT PROJECT PROGRESS REPORT: 01 MAY 2026]

[EXECUTIVE SUMMARY]

“Introvert” has reached full architectural maturity. As of May 1, 2026, the project has successfully transitioned from a conceptual architectural plan to a fully valid cross-platform ecosystem. The project features a high-performance Rust core bridged via zero-copy FFI to a unified Flutter UI, running a dual-deployed (Devnet & Mainnet) gasless Solana incentive economy. Identity, trust, and asset storage are cryptographically unified.

[1. MAJOR ACHIEVEMENTS (PRODUCTION LAUNCH)]

[SOLANA MAINNET ECONOMY (FINALIZED)]

- [PRODUCTION DEPLOYMENT]: Officially deployed the Introvert Token (INTR) onto the **Solana Mainnet Beta cluster**.
- [ON-CHAIN MINT]: Initialized Mint Address `EAXT8h2qTtS5RPfAPX3qpbN6b99bqKfNwLKyqZp9ZZPf` with exactly 9 decimals of precision.
- [SUPPLY SEALED]: Minted the fixed initial reward supply of 100,000,000 tokens directly into the Treasury vault and immediately disabled the mint authority.
- [SECURITY ENFORCED]: Removed plain-text JSON keypair files from the active development directory. The master recovery seed phrase was extracted into physical cold storage.

[UNIFIED FLUTTER CONVERGENCE]

- [DIRECT FFI INTEGRATION]: Realized native-speed communication by pivoting from interpreted wrappers to `dart:ffi` directly mapping Rust heap allocations.
- [PLATFORM RESOLUTION MATRIX]: Implemented `lib/native_bridge.dart` supporting dynamic library detection across Android (.so), macOS/iOS (.dylib), Linux (.so), and Windows (.dll).
- [GLASSMORPHIC VISUAL ENGINE]: Delivered the custom “Blueprint UI” with background grids, message bubbles, and causal branch lines drawn natively over the Canvas using a unified `CustomPainter`.

[CORE BACKEND VALIDATION]

- [DERIVED DATA INTEGRITY]: Verified that the single 32-byte Ed25519 root identity correctly derives the local SQLCipher decryption key, network PeerId, and on-chain signature authority on boot.
- [INTEGRATION SUCCESS]: End-to-end Rust to Flutter initialization loops pass local testing completely without memory leaks or segmentation faults.

[2. CORE REGISTRY & ON-CHAIN IDENTITY]

Asset	Environment	Address / Value
INTR Token Mint	Solana Mainnet Beta	EAXT8h2qTtS5RPfAPX3qpbN6b99bqKfNwLKyqZp9ZZPf
INTR Token Mint	Solana Devnet	NCdrqtdCzUBkmNFHEBKlQkcpgGj7GW8gfCSEhoWoSMn
Authority Address	All Clusters	F7wNqXTRyHpKtx9BZEwVefUyf3wqTVw4mAqK2HafNU94
Total Token Supply	Production Cap	100,000,000 (Locked Permanently)

[3. ROADMAP STATUS]

Phase	Description	Status	Progress
Phase 1	Core Networking & Identity	[COMPLETE]	Persistent Ed25519 + libp2p 0.56 stack.
Phase 2	Local Data & State	[COMPLETE]	SQLCipher + Causal Engine + Vector Clocks.
Phase 3	Anchor Topology	[COMPLETE]	Zero-Knowledge Mailbox + Store-and-Forward routing.
Phase 4	VoIP & FFI Bridge	[COMPLETE]	Thread-safe Rust FFI bindings + Opus audio layer.
Phase 5	Unified Flutter UI	[COMPLETE]	Blueprint custom aesthetic canvas + Visual causal lines.
Phase 6	Solana Incentive Layer	[COMPLETE]	Production launch of Mainnet Token <code>EAXT8h</code> . . .
Phase 7	First Light Validation	[COMPLETE]	Full multi-device FFI bridge test successfully verified.

[4. DEPLOYMENT & VALIDATION CHECKLIST]

- ☒ **Security:** Dynamic plain-text keys removed. Master seed extracted to physical cold storage.
- ☒ **Core Sync:** Constant `INTROVERT_TOKEN_MINT` updated in Rust source code (`src/crypto/solana.rs`).
- ☒ **Compilation:** Fully buildable optimized binaries (release profile) compiled without errors.
- ☒ **Test Coverage:** Direct Dart FFI tests successfully loaded memory structures and validated derivation math.

[FINAL STATUS]: The core architecture is completely valid and the tokenized circular economy is live on the Solana Mainnet.
