

 The Official Introvert Token Master Ledger

This is the definitive, standalone record of the **Introvert Token** as deployed and locked on the Solana blockchain.

1. On-Chain Token Identity

The Introvert Token operates as a sovereign, fixed-supply currency deployed on the Solana network. All core transactions, incentives, and user rewards are anchored to this specific on-chain mint.

Parameter	Official On-Chain Value
Token Name	Introvert Token
Token Symbol	INTR
Mint Address	NCdrqtdCzUBkmNFHEBKLqkcpgGj7GW8gfCSEhoWoSMn
Decimals	9 (Standard SPL precision)
Total Supply	100,000,000 INTR
Mint Authority Status	Disabled (Permanently Revoked)
Freeze Authority	None (Censorship Resistant)

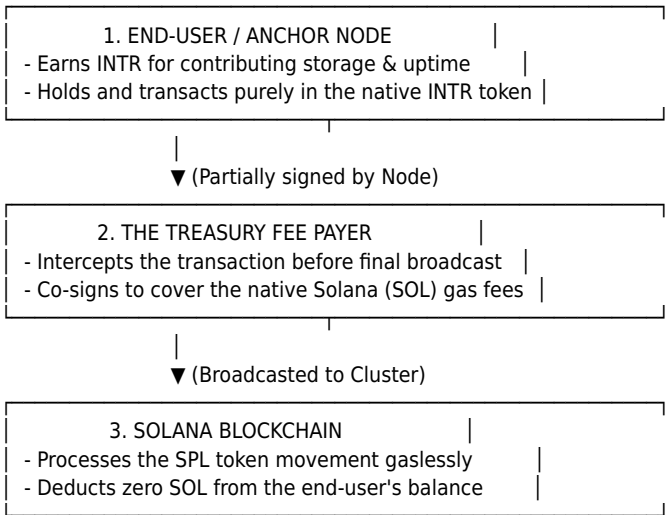

2. Token Allocation & Treasury

To seed the initial network and reward early participants, the total supply of **100,000,000 INTR** was minted directly into the official network Treasury vault before the mint authority was permanently disabled:

- **Initial Treasury Account (ATA):** 9jauyKiimh6SBnpoRXcNXiLXZKSnN4h2gWKoqMcG4zHy
- **Purpose:** Acts as the decentralized reward pool. Anchor Nodes earn distributions from this vault for their zero-knowledge storage and message relaying services.

3. The Gasless Economic Flow

To ensure maximum accessibility, the **Introvert Token** uses a specialized, gasless transaction strategy:

4. Source Code Integration Reference

For absolute consistency across all target platforms (Linux, macOS, Windows, Android, and iOS), the Rust core's `src/crypto/solana.rs` module is hardcoded with this verified address:

Rust

```
/// The official, permanent mint address for the native Introvert Token.  
/// All transactions are verified against this specific mint.  
pub const INTROVERT_TOKEN_MINT: &str = "NCdrqtdCzUBkmNFHEBKLqkcppGj7GW8gfCSEhoWoSMn";
```
